

LESSON 4 QUIZ

Blood Pressure

Name: _____

Date: _____

How to play: For each question, put an X in the box next to the best answer (one answer per question). Get **6 of 8** right to earn the **balloon** badge. Take your time - real doctors think before they answer!

1. What IS blood pressure?

☐
☐
☐
☐

- A. How much blood a person has
- B. How hard the blood pushes against the walls of the arteries
- C. How fast the heart beats
- D. How red the blood is

2. In “64 over 38,” what is the 64?

☐
☐
☐
☐

- A. The baby's weight
- B. The diastolic pressure, between beats
- C. The systolic pressure — the peak push during a heartbeat squeeze
- D. The number of heartbeats

3. Why is a newborn's healthy blood pressure so much LOWER than an adult's?

☐
☐
☐
☐

- A. Newborns are lazy
- B. Smaller body, shorter pipes, smaller pump — smaller pressures do the job
- C. Baby blood is thinner than water
- D. It isn't — babies run 120/80 too

4. What's the famous rule of thumb for a preemie's minimum MAP?

☐
☐
☐
☐

- A. MAP should be at least 120
- B. MAP should be at least about the baby's age-in-the-womb in weeks
- C. MAP should equal the baby's weight in pounds
- D. MAP doesn't matter for preemies

5. How can doctors get a beat-by-beat blood pressure from a newborn without poking through the skin?

- ☐ A. By slipping a soft tube into a blood vessel of the umbilical cord stump
- ☐ B. By squeezing the baby's foot
- ☐ C. By weighing the baby very precisely
- ☐ D. It's impossible

6. Why is making pee such good news for a sick baby?

- ☐ A. It means the diaper company gets paid
- ☐ B. Kidneys only make urine when they're receiving good blood flow – pee is proof of delivery
- ☐ C. Pee keeps the baby warm
- ☐ D. It isn't good news

7. A preemie's blood pressure is low and the baby looks poorly. Which is NOT one of the team's real tools?

- ☐ A. A careful dose of IV fluid
- ☐ B. A medicine drip like dopamine to strengthen the pump and tighten the vessels
- ☐ C. Hunting for a cause like infection or blood loss
- ☐ D. A tiny cup of hot cocoa

8. Why is steady blood pressure especially important for a very premature baby's BRAIN?

- ☐ A. The brain floats higher when pressure is low
- ☐ B. Its brand-new fragile blood vessels can be starved by low flow or burst and bleed with surges
- ☐ C. Low pressure makes babies forget their names
- ☐ D. It only matters for the feet

Score: _____ / 8

Badge earned? YES / NOT YET (need 6)
