

FRESHMAN SEMINAR · RECITATION HOMEWORK

Homework 1: Notes Practice

Name: _____

Date: _____

Instructions: About 20 minutes. Answer in your own words – if your answer means the same thing as the key, it counts. Part B is the heart of this homework: practice turning a paragraph into three big ideas. Total: 21 points.

Part A — Reading your timetable

1. What time is your Biology 101 lecture on Monday? And when is the Biology recitation? (2 pts)

2. Which class comes right after the Chemistry recitation on Tuesday? (1 pt)

Part B — Three big ideas (the main event)

From NICU Tutor: The pulse oximeter is a soft band with two tiny lights – one red, one infrared – that shine right through a baby's foot. Hemoglobin that is carrying oxygen absorbs those two colors differently from hemoglobin that is empty. By comparing how much of each light gets through, the machine works out what percentage of the hemoglobin is carrying oxygen. Because every heartbeat pushes a fresh pulse of blood into the foot, the machine can also count the heart rate. For preemies getting extra oxygen, the team aims for about 90 to 95 percent, because too much oxygen can damage the eyes and lungs.

3. Write the THREE biggest ideas from that passage, in your own words. One line each. (2 points each: the idea is right and it isn't just copied.) (6 pts)

4. Two students took notes on that passage. Student 1 wrote: “The pulse oximeter is a soft band with two tiny lights, one red, one infrared, that shine right through a baby's foot.” Student 2 wrote: “Pulse ox = shines 2 light colors through foot to measure oxygen.” Which student followed the note-taking rule, and why? (2 pts)

Part C — New words

5. Pick TWO new words from any of today's classes (Seminar, Chemistry, or Biology). Write each word, then what it means in your own words. (4 pts)

Word	What it means (my words)

Part D — Quiz strategy

6. You've read a quiz question twice and crossed out two choices you know are wrong. What's the best next step? (1 pt)

- ☐ A. Compare the two remaining choices carefully against what the question actually asks.
- ☐ B. Pick whichever of the two remaining choices is written with more words.
- ☐ C. Pick the remaining choice that appears earlier in the list of options.
- ☐ D. Skip the question, since two choices left means it can't be answered.

Part E — Flashback to NICU Tutor

7. What does the skin probe taped to a baby's belly in an isolette do? (1 pt)

8. Name TWO of the four ways a baby loses heat. (2 pts)

Part F — Think like a student

9. Elizabeth Blackwell was let into medical school as a joke and graduated first in her class. Think about your own week: name ONE specific thing you can do if a class feels hard. (2 pts)

Score: _____ / 21 points

Professor's comment:
