

STATISTICS 101 · WEEK 1 QUIZ

Statistics 101 — Week 1

Name: _____

Date: _____

How to play: Read each question twice, read every choice, cross out the wrong ones, then put an X in the box next to your answer. Get **6 of 8** right to earn the badge.

1. What is statistics for?☐

A. Predicting exactly what will happen to one particular patient tomorrow.

☐

B. Measuring one baby as precisely as possible with the most accurate machine.

☐

C. Keeping a hospital's records of patient names, dates, and room numbers.

☐

D. Making sense of many measurements — finding what's typical and what's unusual.

2. Five babies have heart rates of 140, 150, 130, 160, and 145. What is the mean (average)?☐

A. 725

☐

B. 145

☐

C. 130

☐

D. 150

3. For those same five heart rates, what is the range?☐

A. 5

☐

B. 160

☐

C. 145

☐

D. 30

4. What did Dr. Virginia Apgar invent in 1952?☐

A. A quick 0-to-10 score for how a newborn is doing in its first minutes of life.

☐

B. A test that measures how much oxygen is being carried in a baby's blood.

☐

C. The first incubator that could keep a premature baby warm enough to survive.

☐

D. The blue-light treatment that breaks down bilirubin in jaundiced babies.

5. A baby's Apgar total at five minutes is 9. What does that mean?

- ☐ A. The baby is doing well and needs only routine newborn care.
- ☐ B. The baby has a serious problem that will last for many years.
- ☐ C. The baby needs help with breathing right away.
- ☐ D. The baby is exactly average compared with other newborns.

6. Why do doctors score a newborn with a number instead of just writing “looks fine”?

- ☐ A. Nurses and doctors are not allowed to write their opinions in a medical chart.
- ☐ B. Numbers are quicker to write than a sentence on a busy night in the delivery room.
- ☐ C. Parents find it easier to understand a number than a description of their baby.
- ☐ D. Numbers can be compared between babies, hospitals, and years – and studied in the thousands.

7. Two NICUs both report an average Apgar score of 7 last month. Which statement is TRUE?

- ☐ A. Both units must have treated their babies equally well, because the averages match.
- ☐ B. One unit's babies could all be near 7 while the other's are a mix of very high and very low scores.
- ☐ C. Every baby in both units must have scored exactly 7 for the averages to come out equal.
- ☐ D. The two units must have cared for exactly the same number of babies last month.

8. In NICU Tutor you learned a newborn's heart rate is normally about 100-160. Where did that range come from?

- ☐ A. From the alarm limits that the monitor's manufacturer sets on the machine at the factory.
- ☐ B. From dividing a typical adult's heart rate by a typical newborn's weight in kilograms.
- ☐ C. From measuring the heart rates of thousands of healthy newborns and seeing where most of them fell.
- ☐ D. From the heart rate of the very first baby who was ever connected to a monitor.

Score: _____ / 8

Badge earned? YES / NOT YET (need 6)
