

FRESHMAN SEMINAR · WEEK 2 QUIZ

Freshman Seminar — Week 2

Name: _____

Date: _____

How to play: Read each question twice, read every choice, cross out the wrong ones, then put an X in the box next to your answer. Get **6 of 8** right to earn the badge.

1. What is the “forget it” test for a sentence in a lecture?☐
☐
☐
☐

- A. Ask whether the sentence is one you already forgot from NICU Tutor.
- B. Ask whether the rest of the lecture would still make sense if you forgot it.
- C. Ask whether the professor has forgotten to explain the sentence clearly.
- D. Ask whether you could forget the sentence and look it up again later.

2. “Most of the air, about 78%, is nitrogen; your body breathes it in and right back out, like a passenger who never gets off the bus.” Which is the big idea in that sentence?☐
☐
☐
☐

- A. Nitrogen makes up exactly 78 percent of the air we breathe.
- B. Air behaves like a bus, carrying passengers in and out.
- C. Most of the air is nitrogen, and the body doesn't use it.
- D. The body breathes nitrogen out slightly faster than in.

3. Where do big ideas most often hide in a lecture?☐
☐
☐
☐

- A. In headings, in the first and last sentences of a section, and in things said more than once.
- B. In the jokes, in the pictures, and in the links at the end of the lecture.
- C. In the quiz questions, in the homework, and in the flashback boxes only.
- D. In the tables of numbers, in the dates of discoveries, and in the names of scientists.

4. In a 2006 experiment, some students reread a passage and others closed it and wrote down what they remembered. When everyone was quizzed a week later...☐
☐
☐
☐

- A. neither group remembered much, because a week is too long to wait.
- B. both groups remembered about the same, because they spent equal time.
- C. the students who reread remembered much more, because they saw it more often.
- D. the students who tested themselves remembered much more than the rereaders.

5. What did Leonardo da Vinci draw around 1511 that no one had drawn accurately before?

☐
☐
☐
☐

- A. A baby curled inside the womb, with its umbilical cord.
- B. The four rooms of the heart with all of its valves.
- C. A red blood cell as seen through a microscope lens.
- D. A premature baby inside the first incubator machine.

6. Which of these numbers from this morning's Chemistry is worth keeping in your notes?

☐
☐
☐
☐

- A. The pH of black coffee: about 5.
- B. Blood's normal pH: 7.35 to 7.45.
- C. The name of Sørensen's brewery: Carlsberg.
- D. The year pH was invented: 1909.

7. How do this week's dashed "big idea" boxes work?

☐
☐
☐
☐

- A. Skip them, because the big ideas are now printed on the Class Notes sheet.
- B. Read the professor's idea first, then copy it onto the notes sheet word for word.
- C. Click to reveal the idea, then write down every sentence in the section.
- D. Write your own idea on the notes sheet first, then click to check it against the professor's.

8. From the isolette lesson, which of these is a DETAIL rather than a big idea?

☐
☐
☐
☐

- A. Getting cold makes a baby burn sugar and oxygen it needs for growing.
- B. The machine adjusts its own heat by chasing a skin-probe reading.
- C. Premies can't keep themselves warm, so the isolette does it for them.
- D. The humidity inside is often set to 70-85% for the tiniest babies.

Score: _____ / 8

Badge earned? YES / NOT YET (need 6)
